

iSqFt Takeoff

View all of your electronic plans in one easy-to-use application!

Generate faster and more accurate quantity takeoffs using iSqFt Takeoff's* cutting edge technology. iSqFt Takeoff is integrated to work with electronic plans, including those taken from iSqFt's Private Construction Office™ and Internet Plan Room applications. You can also use iSqFt Takeoff with traditional paper plans and a digitizer. Quantify lengths, areas, volumes, and counts right on your computer screen with a click of your mouse. Whether you're a general contractor, a subcontractor, or a project manager, this program is ideal for meeting your online takeoff needs.

Print your takeoff with a click of your mouse.

A navigation window—so you never lose your place when performing a takeoff.

Choose present scales or customize your own.

A file tree gives easy access to documents within an iSqFt Construction Office.

Automatically group by type and easily quantify lengths, areas, counts, and volumes.

View electronic drawings in the background and perform a takeoff right on top of it.

Area grouping functionality allows you to do room-by-room takeoffs.

- Integrated fully with iSqFt Private Construction Office and Internet Plan Room applications
- Open more images than with any other product on the market—including images native to iSqFt applications, other standard image files, and even most CAD drawing formats
- Quantify from scaled drawings and navigate plan details easily
- Use color-coded takeoffs for presentation or job coordination
- Zone an area or phase of work for cost separation
- Store plans and takeoffs digitally
- Transfer current views to MS Word, Excel, or Outlook
- Insert change order drawings and overlay with current takeoff to show drawing changes electronically

Eliminate the guesswork and end countless hours of manual takeoff labor. Let iSqFt Takeoff simplify your takeoff process and give you confidence in your numbers.
